Thesis Title:

New insights into rebound effects: Theory and empirical evidence

Supervisors:

Dr Clevo Wilson (Principal)

Professor Tim Robinson (Associate)

Citation:

This thesis examines the scale of rebound effects from sustainable consumption choices and environmental policies. Rebound effects offset potential environmental benefits of consumer choices due to cost savings. Benefits from policies such as environmental taxation are offset when tax revenues are spent by governments. Both the theoretical insights and empirical results have important implications for governments in their development of energy and environmental policy.
